

PETROL INJECTOR CLEANER

Genuine Parts Bring Genuine Value.

YOUR FUEL INJECTORS ARE DIRTY! Does your car have any of these symptoms?

Insufficient Power

Poor Fuel Economy

Slow Engine Responsiveness

Engine Noise

Rough Idling

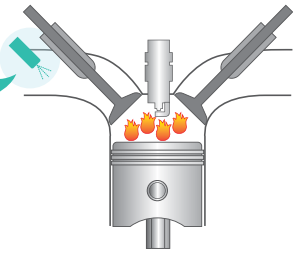

Any Of These Problems Could Be Caused By Dirty Fuel Injectors.

Why do the injectors need cleaning? (What causes deposits build-up?)

Petrol engines generate power by pre-mixing injected fuel and air and then igniting the mixture with precision timing. Over time, the fuel injectors become clogged with deposits of fuel impurities and accumulated dust. Thus, cleaning is vital for maintaining normal injection performance.

What is a fuel injector?

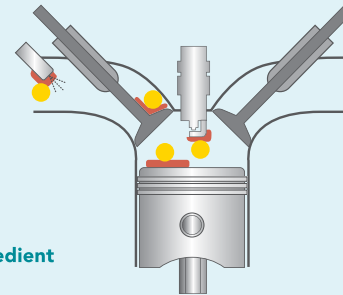

A fuel injector is a device that pumps fuel under high pressure through a nozzle in an internal combustion engine. It has a significant impact on the fuel efficiency, exhaust, and output performance.

HOW IT WORKS! Deposit Removal (Port Injection)

1 A special active ingredient in this cleaner adheres to accumulated deposits on the injectors, intake valves, combustion chambers, and other areas.

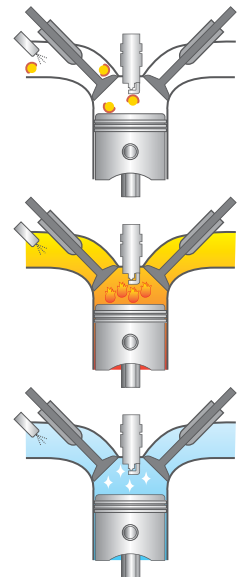

-  Carbon Deposit
-  Special Active Ingredient

2 The special active ingredient then transports these deposits to the combustion chamber.

3 The special active ingredient then accelerates the combustion of the deposits.

4 This cleans the inside of the engine.
